

Traumatic Brain injury (TBI) Research Opportunity

Help us understand the effect of exercise training on hand coordination & weakness after a TBI

Qualifying criteria for participants:

- Between 20 – 60 years old
- Have been diagnosed with a moderate to severe TBI
- Have trouble with hand coordination & loss of muscle strength

You might be eligible for a study that aims to improve hand coordination & lessen symptoms of weakness

There will be 3 measurement visits which include performing hand grip tasks in a functional MRI. You will attend 3 training sessions a week for 4 weeks. You will receive a total of \$390 for testing & training sessions.

The principal investigator for this study is Dr. Soha Saleh.
