

**Have you had a traumatic brain injury?
Are you experiencing weakness in your arm?
You may qualify for a new treatment!**

Kessler Foundation is inviting individuals to an arm-and-hand exercise study. You may qualify- see below!

Qualifying criteria for participants:

- Between 20 – 60 years old
- Have had a head injury more than a year ago
- Have some (but not complete) weakness in one arm due to the injury
- Pain does not limit the function of your arm
- You are not receiving botulinum toxin injections, like Botox, for spasticity management for that arm.

Participation involves 3 hours of screening (1 or 2 visits to Kessler) and daily exercise sessions for 3 weeks. Your arm function will be evaluated before, immediately after, and one month after your last session. All volunteers will be compensated for travel expenses.

The principal investigator for this study is Dr. Peii Chen.
